In english, latvian or russian (native)
Riga, Latvia

17 years in web development. In the beginning it was freelance for small business. Few years later — teamwork in major projects. In the team usually was responsible for **frontend and user interface**. Growing in experience, I've also became a **team lead** and a **business consultant in IT solutions**.

I am **focused on the tasks in dynamic conditions**. I react to both dynamics: the positive changes (new technologies, additional resources) and the negative (changes of priorities, resource reduction). I bring changes to the workflow, to provide a result with relevant requirements. I'm not afraid to change the requirements themselves, if I can prove a positive effect for the final product.
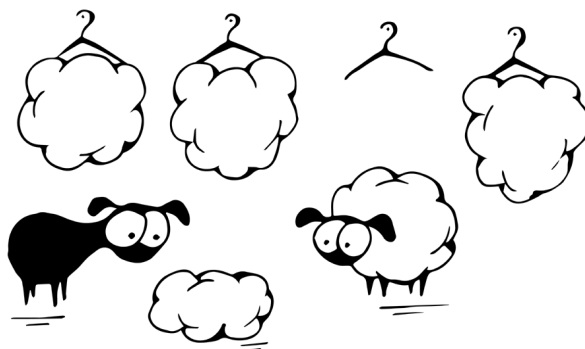

Mission

The result of my work is not for me, not for my bosses and not for the owner of development team. But for the user. The end user has their own goals and objectives, even if he is an ordinary customer in the online shopping or he is an support operator in the large company. My mission is **to help the end user to solve his objectives**. The user's success is my profit.

Position

Without **demanded product**, web development is a useless workflow. I can give the result that meets the requirements and *looks good*. But the result will never *be good*, if no one does not plan to use it.

At this moment

I'm looking for a new project to work. My participation must be based on my web-development skills — in this way I can provide the valuable progress.

frontend

- HTML5, semantic markup and accessibility
- CSS3 techniques and CSS pre-processing (less)
- Wide spectrum cross browser support (including mobile devices)
- JS / coffeescript / ECMAScript 5
- React / Angular / Aurelia / JQuery
- Bootstrap / BEM methodology
- Canvas
- Performance improvements (minification, svg, gzip, sprites, etc)
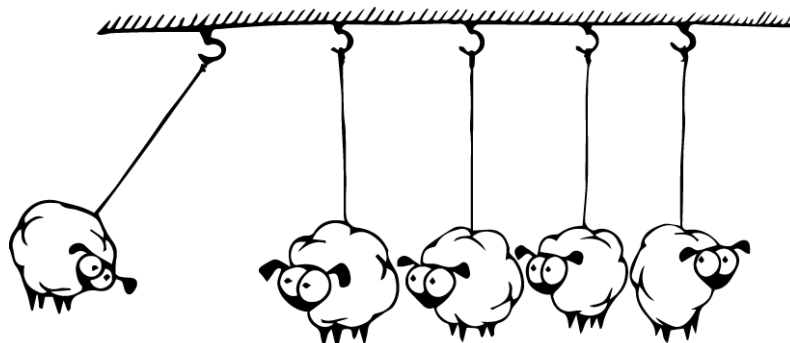

backend

- PHP / mySQL
- XSLT for XML
- Yii / Wordpress

ui/ux

- content-oriented
- powerful methodology for prototype creation
- responsive thinking, adaptive solutions
- Photoshop / Adobe Flash + Actionscript

project & environment

- Agile / Extreme programming / Scrum
- FFF (fix time, fix money, flex scope)
- JIRA / Basecamp for tasks, GIT for the code

common industries, was working for

- online education — 5 years
- mass media and social networks — 4 years
- banking and ATM — 3 years

public projects

- Branchtrack.com — online tool for e-learning specialists
  (co-founder, user interface)
- Pokeroff.ru — poker community (russian content)
  (development lead in 2011)
- Yaklass.ru — education service for schools (russian content)
  (user interface, content development)

teacher

I know how to **explain complex concepts in simple** terms. I taught the basics of programming to children and students (private lessons, public lectures, articles). I was writing **user guides**, **instructions** and other helping materials for IT projects.

Non-formal education is my favorite topic.

drawing artist

I can draw. Know how to create a beautiful and attractive appearance. It is a hobby, but my drawings are often used in commercial and noncommercial design.
